## Chapter 1

## **Hierarchical Index**

### 1.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

MonoBehaviour																						
ButtonManager					 																	
FlipperMove																						
GameManager																						
GroundPoints																						
Obstacle					 																	
Score					 																	
Spring					 																	

## **Chapter 2**

## **Class Index**

### 2.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

ButtonManager							 													
FlipperMove		 			 		 													(
GameManager		 			 		 													(
GroundPoints .		 			 		 													
Obstacle		 			 		 													7
Score		 			 		 													7
Spring					 		 													8

### **Chapter 3**

### **Class Documentation**

**Comments:** The ButtonManager class handles all of the menu buttons for the pre and post-game menu. Essentially this class handles the User Interface outside of the game.

#### 3.1 ButtonManager Class Reference

Inheritance diagram for ButtonManager:

**Public Member Functions** 

- void NewGameBtn (string newGame)
- void ExitGameBtn ()

#### 3.1.1 Detailed Description

as df jhals dkj fhask dj fhalsk dj fhals djk f

#### 3.1.2 Member Function Documentation

#### 3.1.2.1 NewGameBtn()

A test class. A more elaborate class description.

The documentation for this class was generated from the following file:

• ButtonManager.cs

6 Class Documentation

**Comments:** The FlipperMove class handles the movement of the flippers in the game. The flippers are the main game objects that the user interacts with in Space Pinball 2017.

#### 3.2 FlipperMove Class Reference

Inheritance diagram for FlipperMove:

#### **Public Attributes**

- float restPosition = 0f
- float pressedPosition = 45f
- float hitStrength = 10000f
- float flipperDamper = 350f
- string inputName

The documentation for this class was generated from the following file:

· FlipperMove.cs

**Comments:** The GameManager class manages the core gameplay and the state of the pinball game. Only one instance of GameManager is created, and this object organizes and calls the other game modules.

#### 3.3 GameManager Class Reference

Inheritance diagram for GameManager:

#### **Public Attributes**

- float speed
- int score
- · GameObject resetBtn
- Text scoreText
- Text scoreTextMenu
- Text bestScoreText
- · LayerMask whatIsGround
- · Animator gameOverAnim
- · Transform contactPoint

The documentation for this class was generated from the following file:

· GameManager.cs

**Comments:** The GroundPoints class manages the game objects on the floor of the pinball field that the pinball object passes over. These obstacles add points to the user's score, and have different modes with their own associated score multipliers.

#### 3.4 GroundPoints Class Reference

Inheritance diagram for GroundPoints:

**Public Attributes** 

- float scoreBonus = 100
- int multiplier = 1
- int **mode** = 0

The documentation for this class was generated from the following file:

· GroundPoints.cs

**Comments:** The Obstacle class manages the above ground obstacles on the pinball field. Collisions with the pinball add points to the user's score, and certain combinations of collisions will apply score multipliers.

#### 3.5 Obstacle Class Reference

Inheritance diagram for Obstacle:

**Public Attributes** 

- int **mode** = 0
- float scoreBonus = 100
- int multiplier = 1

The documentation for this class was generated from the following file:

• Obstacle.cs

**Comments:** The Score class manages the player's score during the game, as well as the all time high score that has been achieved by previous players.

#### 3.6 Score Class Reference

Inheritance diagram for Score:

8 Class Documentation

#### **Public Attributes**

- · float highScore
- s float currentScore = 0
- float [] topScores

The documentation for this class was generated from the following file:

• Score.cs

Comments: The Spring class manages the spring that 'launches' the pinball at the start of the game.

#### 3.7 Spring Class Reference

Inheritance diagram for Spring:

#### **Public Attributes**

- float hitStrength = 50000f
- float restPosition = 0f
- bool wait = true

The documentation for this class was generated from the following file:

• Spring.cs
